

What the design was missing

Found while building the Carma app from [Carma_App.html](#) (about 50 screens) and the developer handoff README. For the designer: what to add or settle so the design file matches the app being shipped. 5 October 2026.

How to read this

Each item says what is missing, what the app does today, and what we need from design. **High** blocks a store release or contradicts the product spec. **Medium** is a state people will hit in normal use. **Low** is polish. Where we had to decide something ourselves, it is listed in section 7 so the design file can catch up.

Summary

#	Area	Items	Priority
1	Screens with no design at all	19 screens	High
2	Missing states on designed screens (empty, error, permission, limits)	14 states	High
3	Design disagrees with the product spec	7 topics	High
4	Demo data in the prototype contradicts itself	8 mismatches	Medium
5	Accessibility	5 issues	Medium
6	Type, icons and assets	4 issues	Medium
7	Decisions we made that differ from the design	9 changes	Low
8	Questions for the designer	8 questions	High

1. Screens with no design

These exist in the app (routes, server features or the spec) but have no screen in the design. Some show a plain placeholder today; others we built in the Carma style ourselves and need a proper design.

Screen	Where	Today in the app	Needed from design	Priority
Sign in · Welcome back	Onboarding	Not in the design file's screen list (only described in the README). Built, not yet linked.	Sign in, welcome back, "I already have an account", busy and offline states	High
Terms and privacy consent	Onboarding	We added one line on Country: "By continuing you agree to Carma's Terms and Privacy Policy". Required by law (Kenya DPA).	Where consent lives and how it looks	High
Delete my account	My profile	Built: confirm, then signed out. Required by Apple and Google.	Confirm screen and "deleted" state	High
Export my data	My profile	Design has an "Export" row only. Server builds the file.	Request, waiting, ready / emailed states	Medium

Screen	Where	Today in the app	Needed from design	Priority
Plan and billing (owner)	My profile	Design shows one line "CARMA PERSONAL · USD \$2.99/MO". Built a plans list with store purchase, restore, manage.	Plans, purchase, trial ending, renews / ends on, restore	High
Payment screens	Settings	Placeholders: add card, payment method, manage card, card confirmed, charge failed, bank verification, billing history.	Decide which are needed (store billing may replace cards)	Medium
After the trial ends	App-wide	No screen. Server moves the account to a Free plan.	Banner / screen when the trial ends	High
Workshop team	Mechanic	Built a simple Team screen: add by email as mechanic, front desk or apprentice; change role; remove.	Team list, add teammate, role picker, limit reached	High
Business details	Mechanic	Placeholder.	Edit workshop name, town, contact, logo	Medium
Workshop plan	Mechanic	Placeholder.	Workshop plans and limits (jobs a month, staff)	Medium
Inspection and inspection report	Mechanic	Placeholders. Server supports inspections.	Checklist capture and the shared report	Medium
Work report	Mechanic	Placeholder.	Report of work done for the owner	Medium
Bench and activate	Mechanic	Placeholders.	Confirm whether these are needed	Low
Invoice and record payment	Mechanic	Built from the job detail style; no design.	Invoice, part payment, paid	Medium
Customers	Mechanic	Built list and detail in Carma style; no design.	Customer list, detail, add customer	Medium
New job	Mechanic	Built; no design.	Create a job for a customer and vehicle	Medium
Estimates and inspections (owner view)	Owner	Built from the approval screen; no design.	What the owner sees for an estimate or inspection	Medium
Project build	Owner	Design refers to an "E36 build" project but has no project screens. Built stages and parts.	Project overview, stages, parts, modifications	Medium
Tablet layout	App-wide	Design is phone only. We centre a 640px column on tablets.	Confirm, or design a tablet layout	Low

2. Missing states on designed screens

The prototype shows every screen full of data and on the happy path. A real account starts empty, goes offline, refuses permissions and hits plan limits.

State	What is missing	Priority
Empty states	New account with no vehicles, no records, no documents, no reminders, no jobs. Prototype always has three vehicles.	High
Loading	What a screen shows while data loads (skeleton, spinner or nothing).	Medium
Save failed / server error	Only the offline "Save it on this phone?" sheet is designed. Nothing for a failed save online.	Medium
Plan limit reached	Adding a 4th vehicle on Free, a 4th member on Personal, a 6th job on Workshop Free.	High
Pending invite	Spec says a pending invite holds a seat. Members list has no pending row.	Medium
Declined estimate / job	Job board has waiting, in progress, ready, overdue. Declined and invoiced (not yet overdue) are missing.	Medium
Location permission refused	Place sheet: "Use my current location" when location is off. We show a short note.	Medium
Place search: no results / no connection	Place sheet only shows a full list of results.	Low
Camera permission refused	Scan a receipt and Scan VIN when the camera is not allowed.	Medium
Odometer lower than the last reading	Record forms: we show a red warning line under the field. Reading screen blocks the save.	Medium
Reminder needs a date first	e.g. "Remind me before it expires" with no expiry date entered. We disable the switch and say why.	Low
Notification permission refused	What My profile → Notifications shows when the phone blocks notifications.	Low
Long text	Long names (people, garages, workshops, places) and large phone text sizes. Many rows are one line.	Low
Small phones	Checked on iPhone SE size: fits, but odometer and forms are tight. Worth a pass.	Low

3. Where the design disagrees with the product spec

Compared against the Product Overview and the Admin Console user stories. The app follows the spec; the design should be updated or the spec changed.

Topic	Design	Spec	App today
Trial length	7 days (Welcome)	14 days (MON-02)	Welcome now shows the number set in the console.
Seats	"3 of 5 seats"	Personal 3, Pro 10; no plan has 5	Seats left come from the plan.
Garage roles	Contribute, View only	Owner, Member, Pending	Renamed to Owner, Member, Pending.
Workshop roles	One mechanic shown	Owner, mechanic, front desk, apprentice	Team screen with all four.

Topic	Design	Spec	App today
Job states	Waiting, in progress, ready, overdue	Also declined, invoiced not overdue	All server states shown with labels.
After trial	Not shown; Welcome says "subscribe to keep adding records"	Records stay readable; only adding is gated	Server moves to a Free plan where adding still works. Needs a decision.
Currency and numbers	About 83 fixed "KES"; 1,234 format	25+ countries; format per region	Currency and number format follow the account country (84.520 in Germany).

Also check: the mechanic estimate says "parts at cost plus 20%". Confirm the customer never sees this line, or it exposes the mechanic's markup.

4. Demo data that contradicts itself

The app has no demo data, but the prototype is the reference people read, so these confuse anyone checking a screen against it.

- "Today" in the prototype is 9 September 2026, but the story runs on 9 August (invoice 0142 is "14 days overdue" from 26 July). The date picker opens on the wrong month.
- Odometer goes backwards: invoice 0142 reads 85,102 km on 12 July; job 0087 in August says 84,520 km.
- Job 0087: job board total 45,000 across 4 lines; estimate total 34,600.
- Customer is "George" in one place and "Gerald" in another.
- Estimate says pads were last done at 62,400 km, but invoice 0142 replaced them in July.
- Next service: 5,480 km in one place, 4,898 km in another.
- Insurance premium 68,400 on Review, 84,000 on Documents. Vehicle spend shares 44/56/22% (over 100%) and 59/27/14%.
- Fuel price KES 137.87/L on the scan screen, 189/L on the fuel review.

5. Accessibility

- **Contrast:** the faint grey #A39E9D (state labels, meta, unselected text) is about 2.4:1 on the sand background, below the 4.5:1 minimum. The app uses #736D68 instead (same warm grey, 4.7:1). Please update the token.
- **Text size:** about 290 text runs are 10px (eyebrows, labels). Kept for fidelity; the phone's text-size setting still scales them. Consider 11–12px for anything people need to read.
- **Tap targets:** many controls are 20–42px; the usual minimum is 44px. We added extra touch area where we could.
- **Labels:** inputs are labelled by placeholder only. A visible label (or a stated rule for each field) helps screen readers and people returning to a half-filled form.
- **Focus and pressed states:** not designed for most controls. The README gives a press scale; focus (keyboard, switch access) is missing.

6. Type, icons and assets

- **Google Sans 900 (Black)** is specified for titles, but the freely available Google Sans goes up to 700 (Bold). Titles ship in Bold. Please confirm Bold, or supply a licensed Black.
- **Hugeicons Pro** (two-tone and solid) is used throughout; the app uses the free stroke set. Icons look lighter than the design. Confirm the free set, or the team needs a Pro licence.
- **Font files:** the design embeds full fonts (about 3 MB for scripts Carma never shows). The app ships Latin only (456 KB for four weights). Tell us if another script is needed (e.g. Amharic).

- **Flags and icons from CDNs** (flagcdn.com, Hugeicons CDN) fail offline in the prototype. The app bundles them; nothing needed unless new assets are added.

7. Decisions we made that differ from the design

Please review and either adopt in the design file or tell us to change the app.

Change	Why
Consent line on Country	Legal requirement; the design had no consent step.
Record forms keep Review and "What will change"	Design saves straight from the form. We kept the review steps, as in the capture flow.
Faint text #A39E9D → #736D68	Contrast.
Titles in Bold (700)	900 Black is not available in the free font.
Number format per country	Spec. 84.520 in Germany, 84 520 in France, 84,520 in Kenya.
Place sheet "Used before" list	Without a Google Places key, the sheet lists places this garage used before.
Odometer warning on forms	Red line under the field when the reading is lower than the last one.
Team screen (mechanic)	Built in Carma style; needs a real design.
Tablets: centred 640px column	Design is phone only.

8. Questions for the designer

- After the trial: block adding records (Welcome copy) or keep a Free plan (server today)? What does the person see on the day it ends?
- Trial: 7 days or 14?
- Where should sign-in sit: before Country (README) or later, once there is something to save?
- Which payment screens are needed if billing is through the App Store and Google Play?
- Garage-ready rows: where should each row go? The prototype returns Home.
- Should the review steps after a record form stay, or should forms save straight away as designed?
- Is the mechanic markup line ("parts at cost plus 20%") ever shown to the owner?
- Is a tablet layout wanted, or is the centred phone column enough?

Prepared by the build team from the working app, the design file, the handoff README and the October 2026 app audit.
